*Business Name Street Address City, State, Zip*

To Whom It May Concern:

I would like to take this opportunity to introduce myself and express my interest in joining the *Business Name* team.

As a graduate of the Covered 6 Cyber Security Technician program, I have received 400 hours of rigorous training in all aspects of cyber security which have prepared me to provide front line information technology and cybersecurity support. The Covered 6 Academy holds the United States Department of Labor National Program Standard for cyber security training, and I have been fortunate to receive highly specialized vocational instruction in the areas of hardware, software, procedures, and protocols needed to maintain the security and integrity of information technology systems, networks, and devices.

Most recently, I have expanded upon my skills and knowledge base by attending an intensive 200- hour academy that focused on penetration testing and cyber security analytics. The academy provided me with an in-depth understanding of the CompTIA PenTest+ and CySA+ certification content. This hands-on training equipped me with the ability to plan, scope, and manage weaknesses in a network, as well as to apply behavioral analytics to networks and devices to prevent, detect, and combat cybersecurity threats. As part of this advanced training, I have also honed my skills in threat management, vulnerability management, incident response, and the legal and compliance aspects of cybersecurity.

Building on my past experiences, I have participated in countless hours practicing cyber-range simulations, building networks, identifying threats, and defending against intrusion and attack. I have an understanding of policies, procedures, and protocols required to establish and maintain security.

My dedication to expanding my knowledge and skill sets in the field of cybersecurity has empowered me to bring a unique blend of expertise, insightful problem-solving ability, and dedication to any professional environment. The combination of my exceptional education and personal attributes ensures that I am a highly trained cyber security professional proficient in maintaining the security and integrity of information technology systems, networks, and devices. I am well prepared to meet any information technology threat or challenge in 21st century society.

I welcome the opportunity to further discuss how my training, skills, and experience may be leveraged to positively impact the mission and ensure the security of *Business Name*. I may be reached at *phone number and email address*.

Sincerely,

*Graduate Name*
